How can the benchmark for foreign part separation be improved even more?

With our new T-SCAN TS-T5. While our Foreign Part Separator SP-FPU works already with three modules – for coloured/dark, transparent and fluorescent foreign parts – the T-SCAN uses an additional module for shiny foreign parts.

Innovation number two is the unique T-SCAN camera and lighting technology with 1072 LEDs. The new lightsystem is significantly brighter, more energy saving and durable, while the cameras feature a higher resolution and scanning frequency.
