## Bangladesh needs to strengthen its Supply Chain

**B**angladesh, the second largest apparel exporter to the world after China, exported garments worth US\$ 28.15 billion in 2017. Its apparel exports have grown from \$ 4.8 billion in 2000 at a CAGR of 13% and are expected to keep growing in double digits in the future.

Bangladesh is targeting to touch US\$ 50 billion worth of exports by 2022, coinciding with **Golden Jubilee** (50 years) of their independence.

For its garment manufacturing, Bangladesh significantly needs to depend on imports of raw material including fibre, yarn, fabrics, dye stuff, machinery (both textile and garment), as well as all other services needed for successful exports of RMG. Its imports of clothing raw materials have increased at a CAGR of 7% reach \$10.3 billion in 2016.

Currently, Bangladesh imports its required consumption of yarn and fabric to fill the demand-supply gap. Out of its total imports, cotton textiles is the largest imported category by Bangladesh, representing 55% of total textile and apparel imports (2016). This is followed by man-made textiles, others and apparel with a share of 35.0%, 6.8% and 3.2% respectively.

## Bangladesh looks forward to be self reliant for textiles, yarns, fabrics

**B**angladesh is also fast working on becoming self sufficient in terms of raw material like yarns, fabrics etc. Many new investments are planned in the spinning and weaving sectors of Bangladesh in the coming years with many big firms showing their interest to set up spinning and weaving units there, resulting in lot of technology machinery/parts and know-how support.
